### Choosing your flu shot vaccination: the difference between Trivalent and Quadrivalent flu vaccine

The trivalent vaccine protects against three different flu viruses: two A-strains; H1N1 and H3N2 and one B-strain, B/Victoria. The quadrivalent vaccine provides the same benefits as the trivalent vaccine, with the added bonus of an addition B-strain, B/Yamagata.

Therefore, by choosing the quadrivalent flu vaccine you will have up to 33% more protection against the flu.

### July Spotlight - Fuel the body, Feed the mind

Check out the blog by VaxPro Vice President Steve Nye regarding the importance of eating breakfast every day.
